

Venus

Planet information :

Name : Venus

Famous color : brown (the true color is white)

Diametre : 12.104 km

Satelite : none

Description :

The second closest planet to the sun, this planet is much bigger than mercury

. This planet was named after a Roman Goddess of love and beauty, also the only planet that named after a woman. The planet was named Venus because that's one of the five planets that shine so bright from what the ancient people knew
