

LkCa 15 b

Planet information :

Planet type : Young Gas giant

Constellation : Taurus-Auriga Star Forming Region

Distance : 430 light years

Temperature : -5000°C

Mass : 1908 M_{\oplus}

Observation speed : x 1000

Description :

this planet has a disk, a left over dust, over it. The dust can be collide or stick together in the disk. The core of the planet is called 'planetesimal'.
